

JIRA Integration - Using Vibe Code

Ask mode prompt

FRONTEND (React + Vite)

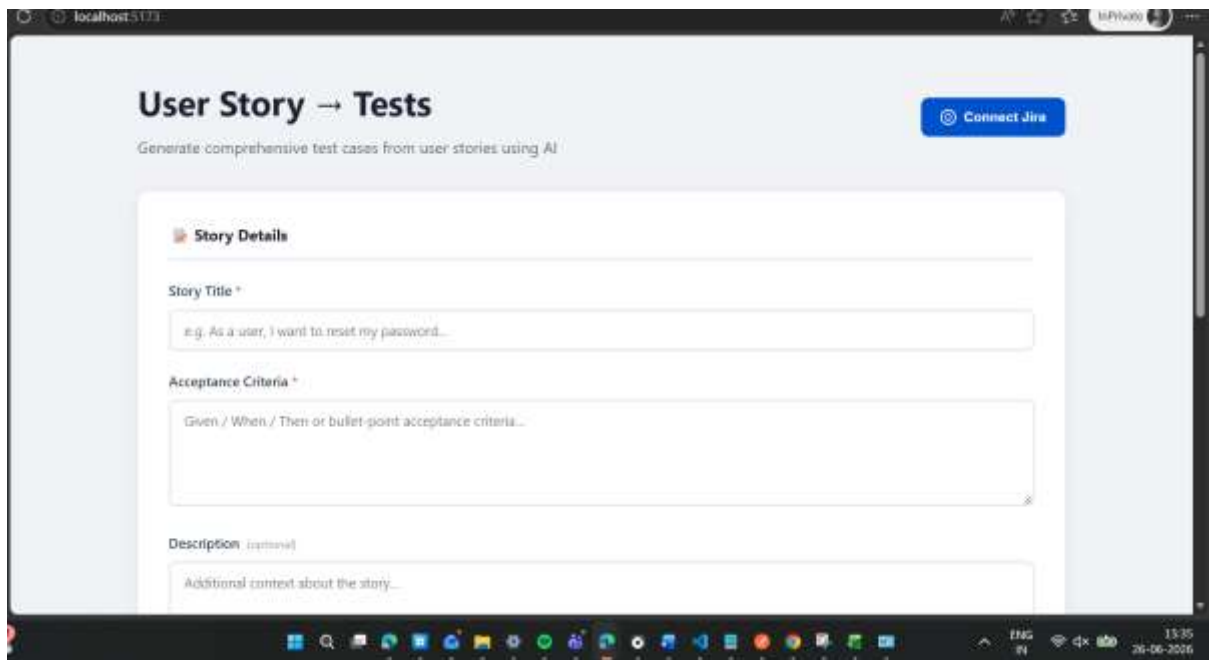

Backend API – Health Check

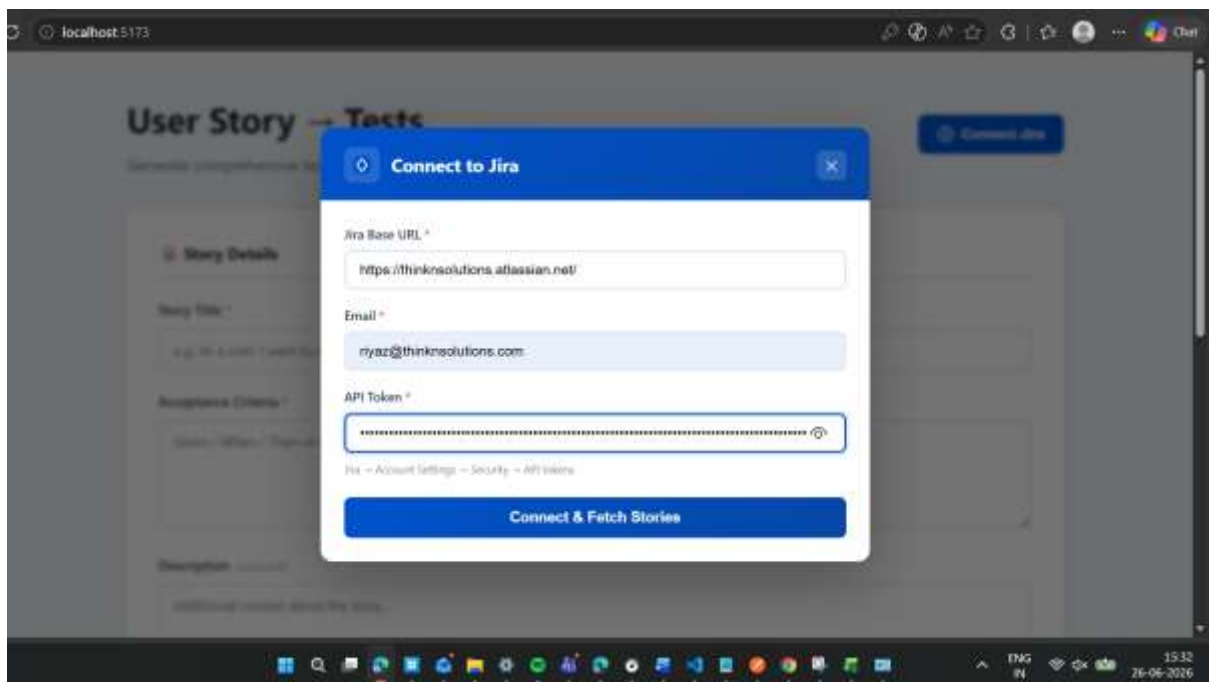

The screenshot shows a VS Code editor with the following components:

- Explorer:** Displays the project structure, including folders for 'backend', 'frontend', and 'node_modules'.
- Main Editor:** Shows the 'Pretty-print' of a JSON response from the health check endpoint: `{ "status": "OK", "timestamp": "2025-06-26T09:54:42.886Z" }`.
- Terminal:** Displays the output of the command `npm run dev`, showing the server is running on port 8080 and using the Groq API.
- Chat:** Shows a session titled 'read and get the architecture of each file in...' with a list of prompts and a 'MORE' button.

A1

#	Type	Scenario	Pre-condition	Steps	Expected Result	Pass / Fail	Notes / Defect Link
1	Positive	Verify insurance Eligibility for Covered Test	Patient is scheduled for a radiology test and has valid insurance coverage	Select "Schedule Test" for the patient's radiology test Verify API call is sent to the insurance provider Verify insurance eligibility is confirmed	System confirms insurance eligibility and schedules the test		
2	Positive	Pre-authorization for Test Requiring Authorization	Patient is scheduled for a radiology test that requires pre-authorization	Select "Schedule Test" for the patient's radiology test Verify pre-authorization request is sent to the insurance provider Verify authorization details are stored in the billing record	System initiates pre-authorization and stores authorization details		
3	Negative	Notification for Non-Covered Test	Patient is scheduled for a radiology test that is not covered by their insurance	Select "Schedule Test" for the patient's radiology test Verify system generates result indicating test is not covered Verify notification is sent to the coordinator and patient	System notifies coordinator and patient, and offers alternative payment options		
4	Negative	Invalid Insurance Details	Patient has invalid insurance coverage	Select "Schedule Test" for the patient's radiology test Verify API call is sent to the insurance provider Verify system handles invalid insurance details error	System handles error and notifies the coordinator		
5	Edge	API Call Failure	API call to insurance provider fails	Select "Schedule Test" for the patient's radiology test Simulate API call failure Verify system handles API call failure error	System handles error and notifies the coordinator		
6	Edge	Authorization Timeout	The authorization request times out	Select "Schedule Test" for the patient's radiology test Simulate a pre-authorization timeout Verify system handles authorization timeout error	System handles error and notifies the coordinator		
7	Authorization	Authorization Requirements	Patient is scheduled for a radiology test that requires pre-authorization	Select "Schedule Test" for the patient's radiology test Verify pre-authorization request is sent to the insurance provider Verify authorization details are stored in the billing record	System initiates pre-authorization and stores authorization details		
8	Non-functional	Performance Test	System has a large volume of patients scheduled for radiology tests	Simulate a large volume of patients scheduling radiology tests Verify system performance and response time	System performs well and responds within acceptable time		
9	Non-functional	Security Test	System has sensitive patient data	Verify system encrypts patient data Verify system has access controls in place	System protects patient data and has access controls in place
